Subject: 2009 Hemlock Woolly Adelgid Detection Survey Results

To: Leanne Marten, Forest Supervisor *Leanne*  
Allegheny National Forest

Starting in June of 2009, Forest personnel conducted a hemlock woolly adelgid detection survey of 70 hemlock stands totaling 10,346 acres on the Allegheny National Forest (ANF). No signs of the hemlock woolly adelgid were detected. However, the presence of hemlock woolly adelgid especially in its early stage of infestation is extremely difficult to detect. The accompanying table and map show the locations of this year's survey.

The hemlock woolly adelgid, *Adelges tsugae* (HWA), was introduced into the Eastern United States from Asia in the early 1950s near Richmond, Virginia. The adelgid was present on exotic trees that a private collector planted in his arboretum. The distribution of the HWA remained localized for the next decade. Since the 1960s the population has spread throughout the Northeastern United States. In 2005, HWA was reported in Elk County (Benezette Township) approximately 25 miles from the Allegheny National Forest (for more information please visit:

<http://www.dcnr.state.pa.us/forestry/leaflets/fpmnews-sep05.pdf>). The impact of HWA on eastern hemlock (*Tsuga canadensis*) is severe; significant tree mortality usually occurs within 4 to 7 years after infestation. This insect not only threatens the hemlock resource but the unique ecosystem it creates. The ANF should be planning for the arrival of the HWA. Forest Health Protection staff can assist the forest in the development of these plans. It is recommended that the ANF begin these discussions and layout a strategy for dealing with this exotic insect before it is detected.

Even though HWA has not been detected on the forest, it is important that field-going personnel continually monitor for evidence of HWA and report this information to the Morgantown Field Office. As part of our continuing monitoring efforts for next year, we plan to visit sites that have the highest likelihood of becoming infested. These areas will include campgrounds, trailheads, and other highly visited areas.

I personally would also like to extend my appreciation to Eric Monger and Taylor Freeman for their valuable assistance with this survey. If you or any of your staff have any questions or comments regarding this survey, please contact Rick Turcotte at (304) 285-1503.

Sincerely,

Robert Lueckel  
Field Representative
